# Syncing IFRC Learning Platform eCourses with REST

You can sync your REST profile with your IFRC Learning Platform profile **if you have the same log in email for both systems**.

This way you don't need to separately attach your eCourse certificates in your REST profile. Please note that the syncing might take some time and the data might not transfer immediately from the IFRC Learning Platform to your REST profile's **Education tab** (this might take approximately some hours or even one day).

Log in to your REST profile, **go to Education tab,** and on the top right hand side see the button "**sync with IFRC learning platform**", press on it and wait till it syncs all the courses. You can check the list then in the Education tab.

Attaching IFRC Learning Platform eCourse Certificates Manually in REST

In case you have issues with the IFRC Learning Platform syncing function in REST, please attach the completed eCourse certificates manually through the "Add other courses" function on the top right hand side of the **Education tab** on your REST profile. Remember to save the certificate with the eCourse title and date of completion.

In case you have completed an eCourse but on the e-learning platform the course does not show as completed (remember to evaluate the course too), send an email to support.learning@ifrc.org.
